3.5.	Configuration	7

## 1. About this documentation

**Intention of documentation** You can install the extended Attachment list

### Legend

---

## 2. Basics

Installation of extended Attachment list (short XATT) is performed via Import of Transport Requests into your SAP system.

You require permissions to import Transport Requests into the SAP System.

### **Release compatibility:**

XATT Release 7.0 is compatible with Basis Release 700 and higher and all application releases adapted from them.

### **Minimum requirements for Support Packages:**

Currently no known restriction exists. Use a current support package.

### **Minimum requirements for SAP Kernel:**

The license check of the extended attachment list requires a current SAP Kernel. Very old SAP Kernel Release do not contain the required cryptographical functions.

The lowest tested Kernel is SAP Kernel 721.

## 3. Installation

### 3.1. Attach transports

Attach following transport to Import Queue (STMS):

<b>EC2K900074</b>	dbosoft Core Library 1.1
<b>NA1K900077</b>	dbosoft Licensing Module 2.6
<b>EC2K900079</b>	dbosoft XATT 7.0 R4

### 3.2. Import

1. Activate the import option „Ignore Invalid Component Version“.
2. Import all transports in one transport queue.
3. Check import protocols and correct potential errors.

**Note:**

The transports contain no client depended objects. For this reason, you can import the transports in any client.

## Post activities

### 3.3. Post Installation activities

To activate the Extended Attachment list, start transaction SFW5 and activate at least following Business Function:

/WASOL/XATT\_01

#### Classic or New Integration

Decide if you would like to use the extended Attachment list in classic mode (separated entry in generic object services) or as replacement for SAP Standard Attachment list:

- Classic mode:  
Start transaction SCPR20 and activate the following Business Configuration Set:  
/WASOL/XATT\_GOS\_ON
- Replacement for Standard List:  
Activate the Business Function /WASOL/XATT\_02 in transaction SFW5.

#### Optional Business Functions

The following Business Functions are optional and can be used to activate additional features:

- /WASOL/XATT\_03  
Display and Edit ArchivLink notes
- /WASOL/XATT\_04  
Create and maintain notes on generic attachments

**Note:**

With the extension /WASOL/XATT\_03 the notes are checked for each archive document. Depending on the number of archive documents and the connection to the archive, there may be poorer response times when accessing the attachment list.

## License Installation

To use the Extended Attachment list, you must install a license:

Start the transaction /n/WASLIC/ADM

If license validation status is „inactive“, activate license validation now with the button “Activate”.

Copy the installation number from the field „installation number“ to the clipboard and open the link <http://support.dbosoft.eu>

Create a support ticket to request a license key. Please provide your customer number and the installation number in the ticket.  
After validation, the support will send you a license file.

Import the license file with the button „Install”.

## 3.4. Post Upgrade activities

If you have upgraded from an older version of the Extended Attachment list you first must perform the new installation activities from above.

Then perform following migration steps:

### Removal of Classic Integration

If you have activated the New Integration should remove the following Customizing entry:

Transaction SM30 – Table SGOSATTR  
Delete the entry /WASOL/XATTA

### Update of BADIs

If you already have implemented BADIs you should consider migrating the implementation to the new, kernel based BADIs. However, this is optional, the old BADIs can still be used but will be removed in next release.

#### **Update of Filter Classes**

If you have implemented custom Filter Classes you must migrate them to the new methods of Interface /WASOL/IF\_XATT\_ITEM\_FILTER. More information about implementation and migration you can find in the interface documentation.

### **3.5. Configuration**

Documentation for configuration of Extended Attachment list you can find in SAP Implementation Guide after import:

Transaction spro -> SAP Reference IMG -> SAP Netweaver -> SAP Applicationsserver -> Basis Services -> Extended Attachment list

**Note:**

Implementation Guide documentation is only available in German and English.
